

## MS4525DO

### SPECIFICATIONS

- ◆ PCB Mounted Digital Output Transducer
- ◆ Combination Temperature and Pressure
- ◆ I<sup>2</sup>C or SPI Protocol
- ◆ Differential, Gage, Absolute, Compound, & Vacuum
- ◆ Temperature Compensated
- ◆ 3.3 or 5.0 V<sub>DC</sub> Supply Voltage
- ◆ Low Power Option Available (standby < 1μA)

The MS4525DO is a small, ceramic based, PCB mounted pressure transducer from Measurement Specialties. The transducer is built using Measurement Specialties' proprietary UltraStable™ process and the latest CMOS sensor conditioning circuitry to create a low cost, high performance digital output pressure (14bit) and temperature (11bit) transducer designed to meet the strictest requirements from OEM customers.

The MS4525DO is fully calibrated and temperature compensated with a total error band (TEB) of less than 1.0% over the compensated pressure range. The sensor operates from single supply of either 3.3 or 5.0V<sub>DC</sub> and requires a single external component for proper operation

The rugged ceramic transducer is available in side port, top port, and manifold mount and can measure absolute, gauge, differential, vacuum or compound pressure from 1 to 150psi. The 1/8" barbed pressure ports mate securely with 3/32" ID tubing.

### FEATURES

- ◆ PSI Pressure Ranges
- ◆ PCB Mountable
- ◆ Digital Output
- ◆ Barbed Pressure Ports

### APPLICATIONS

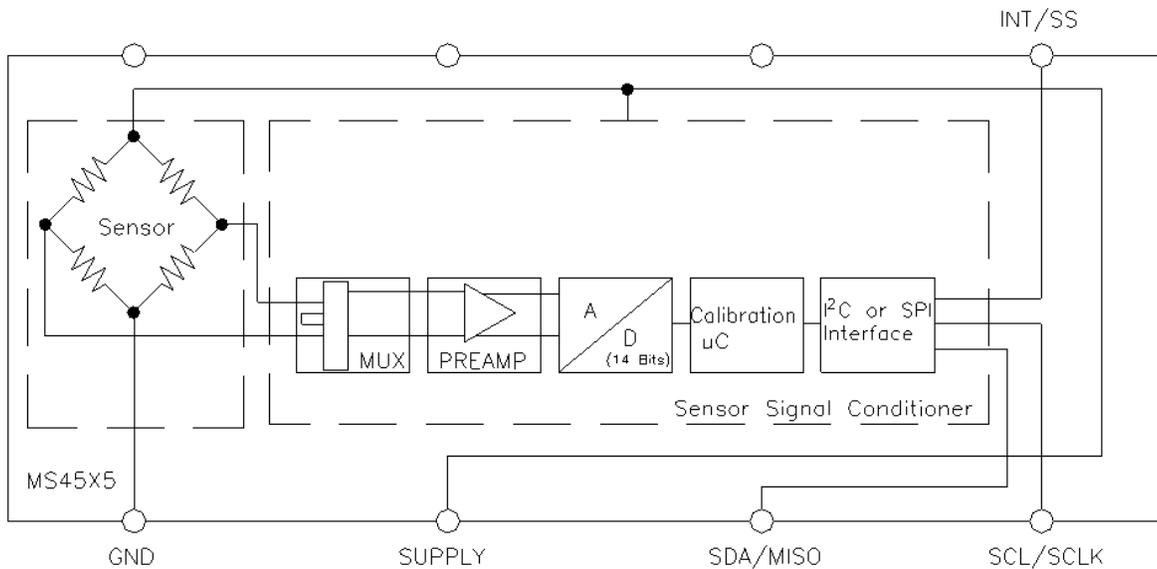

- ◆ Blocked Filter Detection
- ◆ Altitude and Airspeed Measurements
- ◆ Medical Instruments
- ◆ Fire Suppression System
- ◆ Panel Meter
- ◆ Air Movement/Environmental Controls
- ◆ Pneumatic Controls

STANDARD RANGES (PSI)

Pressure	Absolute	Gage	Differential	Compound	Vacuum	Option Availability
1		DS, SS, TP, MM	DS, SS, TP, MM			-F, -L, -M
2		DS, SS, TP, MM	DS, SS, TP, MM			-F, -L, -M
5		DS, SS, TP, MM	DS, SS, TP, MM			-F, -L, -M
15	SS, TP	DS, SS, TP, MM	DS, MM	SS, TP	SS, TP, DS	-F, -L, -M
30	SS, TP	DS, SS, TP, MM	DS, MM	SS, TP		-F, -L, -M
50	SS, TP	DS, SS, TP, MM	DS, MM	SS, TP		-F, -L, -M
100	SS, TP	DS, SS, TP, MM	DS, MM	SS, TP		-F, -L, -M
150	SS, TP	DS, SS, TP, MM	DS, MM	SS, TP		-F, -L, -M

See Package Configurations: DS= Dual Side Port, SS= Single Side Port, TP= Top Port, MM= Manifold Mount  
 Only I<sup>2</sup>C Protocol is Available on "L" type Pin Styles; Reference Ordering Information for Details  
 Pin Style "L" is only available SS and MM port types.  
 Pin Style "C" is only available SS, TP and MM port types.

Operating Temperature	-25		105	°C	
Weight		3		Grams	
Update time		0.5		mS	6
Start time to data ready			8.4	mS	6
Solder temperature	250°C MAX 5 SEC.				
Media	Non-Corrosive Dry Gases Compatible with Ceramic, Silicon, Borosilicate Glass, RTV, Gold, Aluminum and Epoxy. See "Wetted Material by Port Designation" chart below.				

### Notes

1. Proper operation requires an external capacitor placed as shown in Connection Diagram. Output is not ratiometric to supply voltage.
2. The maximum deviation from a best fit straight line (BFSL) fitted to the output measured over the pressure range at 25C. Includes all errors due to pressure non linearity, hysteresis, and non repeatability.
3. Total pressure error band includes all accuracy errors, thermal errors over the compensated temperature range and span and offset calibration tolerances. For ideal sensor output with respect to input pressure and temperature, reference Transfer Function charts below. TEB values are valid only at the calibrated supply voltage.
4. The deviation from a best fit straight line (BFSL) fitted to the output measured over the compensated temperature range.
5. For errors beyond the compensated temperature range, see Extended Temperature Multiplier chart below.
6. Start time to data ready is the time to get valid data after POR (power on reset). The time to get subsequent valid data is then specified by the update time specification.
7. This product can be configured for custom OEM requirements, contact factory for lower power consumption or higher accuracy.

## CONNECTION DIAGRAM

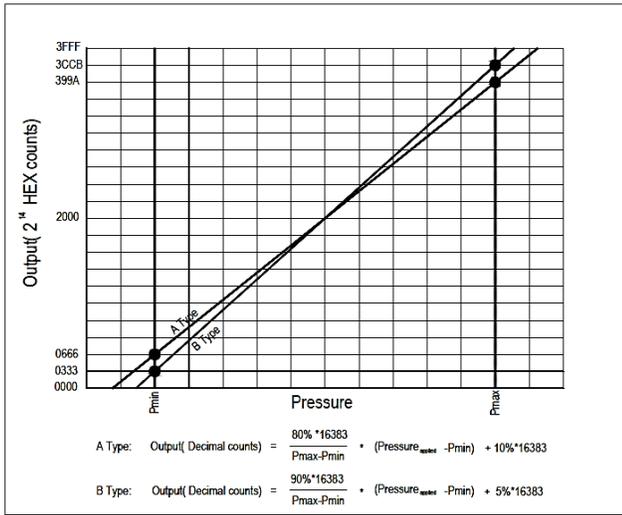

### Notes

1. Place 100nF capacitor between Supply and GND to within 2 cm of sensor.

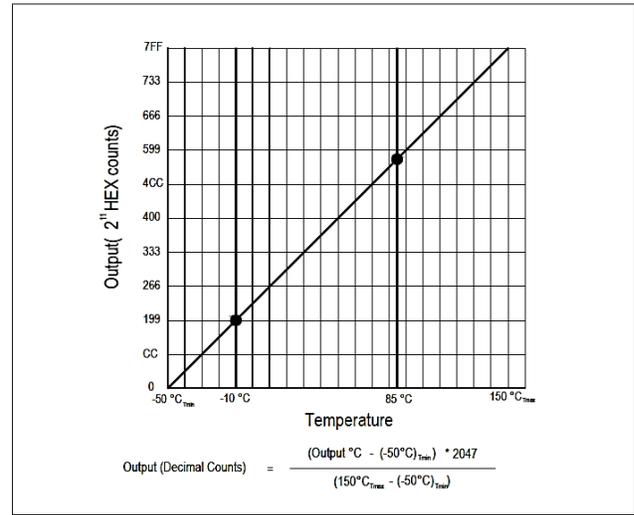

## PRESSURE AND TEMPERATURE TRANSFER FUNCTION

## PACKAGE, PINOUT & PRESSURE TYPE CONFIGURATION

Pin Name	Pin	Function		
GND	1	Ground		
SUPPLY	2	Positive Supply Voltage		
SDA	MISO	3	I2C Data	SPI Data
SCL	SCLK	4	I2C Clock	SPI Clock
INT	SS	5	I2C Interrupt	SPI Chip Select
	6-8	No Connection		

INT is not available for Pin Style "L" models

Pressure Type	P <sub>min</sub>	P <sub>max</sub>	Description
Absolute	0psiA	+P <sub>range</sub>	Output is proportional to the difference between 0psiA (P <sub>min</sub> ) and pressure applied to Port 1.
Differential/ Bidirectional	-P <sub>range</sub>	+P <sub>range</sub>	Output is proportional to the difference between Port 1 and Port 2. Output swings positive when Port 1 > Port 2. Output is 50% of total counts when Port 1 = Port 2.
Gauge	0psiG	+P <sub>range</sub>	Output is proportional to the difference between 0psiG (P <sub>min</sub> ) and Port 1. Output swings positive when Port 1 > Port 2.
Vacuum	-15psiG	+0psiG	Output is inversely proportional to the difference between -15psiG pressure (P <sub>min</sub> ) and pressure applied to Port 1.
Compound	-15psiG	+P <sub>range</sub>	Output is proportional to the difference between -15psiG pressure (P <sub>min</sub> ) and pressure applied to Port 1.

\*P<sub>range</sub> is equal to the maximum full scale pressure specified in the ordering information.

Standard ranges (psi) by port style

## APPLICATION NOTES

Measurement Specialties offers a comprehensive selection of product support documentation.

### MS45xx Series Application Note

- ◆ Bypass Capacitor Selection
- ◆ Pressure Hose Recommendations
- ◆ PCB Layout Recommendations

### Interfacing to MEAS Digital Pressure Modules

- ◆ I<sup>2</sup>C or SPI Protocol Description
- ◆ Data Fetch, Measurement Request Commands
- ◆ Timing Diagrams

### Configuration, POR and Power Consumption

- ◆ Standard and Low Power Configuration
- ◆ Power On Reset (POR)
- ◆ Current Consumption by Sampling Frequency

## AVAILABLE OPTIONS

### **Gel Coat (-F Option)**

The MS4525DO is designed for non-ionic and clean dry air applications. Select this option for added protection in high humidity or slightly corrosive environments with the application of a silicone gel elastomer to sensor and ASIC. For questions concerning media compatibility, contact the factory.

### **Low Power (-L Option)**

Select this option for battery powered or handheld device applications. In this configuration, the sensor and calibration microcontroller are powered down, drawing a current of  $\sim 0.6\mu\text{A}$  ( $V_s=5.0\text{ V}_{\text{DC}}$ ). When the master sends a **Read MR** (measurement request) command (I<sup>2</sup>C or SPI); the sensor is “awaken” and begins the measurement cycle; data is then placed onto the output registers. The sensor and calibration microcontroller are powered down again, awaiting the **Read DF** (data fetch) command from the master.
